Methodology No.   : ID_PM007
Version   : Ver1.0
Title   : GHG emission reductions through optimization of boiler operation in
                          Indonesia

Name   : Koji Matsuoka
Affiliated Organization : EMS Section, Innovation Dep., Advanced Solution Div., Solution Service BHQ,
Yokogawa E-mail   : Kouji.Matsuoka@jp.yokogawa.com
Country   : Japan
Part of the document (Cover sheet/A/B/C/etc): B. Terms and definitions Page of the document: Page 2

Comment on the page (including justification of the change): This definitions mention that optimization technology using linear programming method. But there is also non-linear programming method as general technology for optimization. Therefore, non-linear programming method should be added.

Proposed change (including proposed text): I propose to revise the Definitions as follows. "Technology to optimize the operation of existing utility facilities such as boilers through application of software algorithm using linear programming method or non-linear programming method."
