(a) Monitoring point No.	(b) Parameters	(c) Description of data	(d) Estimated Values	(e) Units	(f) Monitoring option	(g) Source of data	(h) Measurement methods and procedures	(i) Monitoring frequency	(j) Other comments

(1)	$EC_{PJ,i,p}$	Power consumption of project chiller *i* during the period *p*	1,872	MWh/p	Option C	Monitored data	Data is measured by measuring equipments in the factory.
							- Specification of measuring equipments：
							  1) Electrical power meter is applied for measurement of electrical power consumption of project chiller.
							  2) Meter is certified in compliance with national/international standards on electrical power meter.
							- Measuring and recording：
							  1) Measured data is automatically sent to a server where data is recorded and stored. Measured data is manually recorded by responsible staff for calculation of emission reduction.
							  2) Recorded data is checked its integrity once a month by responsible staff.
							The accuracy level of electric meter is ±0.5%.
							The data monitored and required for verification and issuance will be kept and archived electronically for two years after the final issuance of credits.
							- Calibration：
							Calibration was conducted by the Manufacturer at the time of Manufacturer's inspection. Next calibration is required after 10 years.
								Continuously	Automatic collected data is also recorded and stored. Since the project period is 7 years, no calibration will be conducted during the project period.

(2)	$EI_{grid,p}$	Electricity imported from the grid to the project site during the period *p*	59,813	MWh/p	Option B	Invoice from the power company for Option B	[for Option B] Data is collected and recorded from invoices from the power company.	Every month	
(3)	$h_{gen,p}$	Operating time of captive electricity generator during the period *p*	0	hours/p	Option C	Monitored data	Data is measured by meter equipped to a generator.	Continuously	In the project, there is no generator for captive electricity. Thus, this parameter is not applicable for this project.

Monitoring Structure Sheet [Attachment to Project Design Document]

Responsible personnel	Role
Plant Manager	Responsible for project planning, implementation, monitoring results and reporting.
Supervisor	Appointed to be in charge of confirming the archived data that are manually recorded / collected and provided by auto data collection system (the system) after being checked and corrected when necessary. Also, appointed to be in charge of monitoring procedure (data collection/storage and data sharing with manufacturer), including monitoring equipments and calibrations, and training of monitoring.
Chiller Operator	Appointed to be in charge of manual data recording and direct checking of the archived data for irregularity and lack, in order for cross checking of data collected by the system.
